

ZEROVIBE 6050P ISOLATION PLATFORM

Kuzma Ltd presents the Zerovibe 6050P isolation platform designed to eliminate any vibration affecting audio components such as turntables, amplifiers, CD players, etc.

Originally this was designed to isolate electronic microscopes from ground, traffic building and floor vibrations in the range of 1-200 Hz. Very small vibrations mask resolution and by eliminating them it was possible to see more detailed and precise pictures. Now adapted for audio use the effect is similar. The music is far purer with less coloration.

This is an active platform, which senses outside vibrations and, via sensors and piezo motors (six degrees of freedom), neutralises any motion which would otherwise transfer to the audio component.

With no bouncing spring system or movement of the platform at low frequencies, it is self levelling and self adjusting for mass from zero to 140 kg. Simple to use and requiring no maintenance.

Basic data:

Mass: 30 kg
Top size: 600x 500 mm
Height: 100 mm
Load: 0-140 kg
Power: 110 V or 230 V

Made in Switzerland

Suggested retail price with sales tax in EU: 14.900 EUR

Worldwide sales: Kuzma Ltd
